SKILLS

- AWS
- DevOps
- Python
- MySQL
- Linux

HONOR AWARDS

- AWS Certified Cloud Practitioner Certification
- Devops From Udemy
- Python From HackerRank
- MySQL From HackerRank

LANGUAGES

- English
- Telugu

INTERESTS

- Cloud Technologies
- System Monitoring
- Problem Solving
- Continuous Learning
- Collaboration
- Teamwork

PROJECTS

Lift & Shift to AWS Cloud Computing : (Part of Udemy Course)

In a Udemy course, I led the migration of an on-premises app to AWS, aiming to modernize, scale, and cut costs. I established a secure AWS environment (VPC, security groups), deployed app-mirroring EC2 instances with ELB and Auto Scaling. Data moved to S3, Route 53 managed traffic. Strengthened security with IAM, streamlined via CloudFormation and CLI. Rigorous testing ensured a smooth shift. Emphasized training and clear documentation. Leveraged AWS tools: EC2, ELB, Auto Scaling, S3, Route 53, IAM, CloudFormation, and CLI.

Cloud-Hosted Personal Portfolio: AWS S3 and CloudFront (Personal Project)

I initially developed and deployed my personal resume website using Amazon S3 and Amazon CloudFront. Leveraging HTML and CSS, I crafted a static site showcasing my professional background, skills, and achievements. To ensure secure content delivery, I implemented HTTPS through Amazon CloudFront. This highlighted my web development skills and proficiency in utilizing cloud services for hosting and security. While the site was initially on Amazon S3, I later migrated it to GitHub Pages due to cost considerations. This transition not only optimized expenses but also improved my version control and collaboration skills through Git. The website is now hosted on GitHub Pages at <https://gadagojushiva.github.io>

EDUCATION

BTECH in Civil Engineering Siddhartha Institute of Engineering and Technology
